

are triggered when:

- ◆ A county is cleared of microwave links within the unlicensed allocation and UTAM, the spectrum management organization for unlicensed PCS, invokes a "Zone 1 power cap" as a result of third party relocation activities, or
- ◆ A county is cleared of microwave links in the unlicensed allocation and UTAM reclassifies a Zone 2 county to a Zone 1 status, which could not have been accomplished without third party (perhaps a PCS licensed Later Entrant) relocation action.

In effect, UTAM may be either a "Relocator" entitled to reimbursement or a Later Entrant with a reimbursement obligation. ITA will be capable of producing digitized county boundaries to support cost-sharing activities on behalf of UTAM.

### **B.5.2 Depreciation**

Depreciation commences on the date that a PCS Relocator executes a relocation agreement with a microwave incumbent, with the exception of those instances where full reimbursement (up to the cap) is permitted, as discussed in Section B.5.

### **B.5.3 ITA Obligation Notification Procedure**

As presented in Section A.4.3, ITA will distribute its clearinghouse obligation notifications to its PCS Relocators or to other clearinghouses with PCS Relocator registration rights within one business day following verification that it has all necessary administrative, technical and financial information relevant to the microwave relocation transaction. This data is contained within Exhibits B-1 and B-2. ITA will also calculate the reimbursement due in accordance with the cost-sharing formula (see Exhibit B-7) and the regulations regarding full reimbursement.

The notification obligation transmittal will contain relevant administrative information of the PCS Relocator due a reimbursement, a summary of the PTT evaluation performed, the amount of the reimbursement, and a "friendly" informational reminder that payments are due within 30 days of receipt of the ITA obligation notification.

The latter information will be modified to reflect small business entity and unlicensed PCS (UTAM) installment payment alternatives, *i.e.* first installment due for small business entities within 30 days of ITA notification and within 30 days for UTAM in accordance with the trigger mechanisms discussed in Section B.5.1.

#### **B.5.4 Installment Payments**

ITA's clearinghouse reimbursement obligation notifications will be designed to assist those that qualify as designated entities by providing information regarding installment payment options. Specifically, ITA acknowledges that the terms of the installment payment mechanism are identical as those applicable to the Later Entrant's auction payment plan.

Regarding UTAM installment payment procedures, ITA's notification procedures will fully adapt to those procedures presented in Appendix A, paragraph 44, of the FCC's *Report and Order* in WT Docket No. 95-157.

The closure of the ITA clearinghouse function does not release the Later Entrant from continuing installment payments in accordance with the cost-sharing plan specified and communicated.

#### **B.5.5 Payment Verification/Tracking**

While it is not specifically a clearinghouse functional requirement, ITA will initiate procedures on behalf of those Later Entrant customers requesting verification of reimbursement obligation payments through follow-up queries. This information will be recorded within ITA's clearinghouse database for tracking purposes and

reporting, if necessary.

#### **B.5.6 Reimbursement Obligation Dispute Resolution**

ITA has identified its resolution procedures in Section A.8, in the event that a Later Entrant disputes its reimbursement obligation during the clearinghouse notification process.

### **B.6 Summary**

As discussed in Section A.4.1, ITA's Clearinghouse Division will become operational on the date the Bureau selects ITA as a clearinghouse entity. The development of the database and associated software programs necessary to perform the activities presented within this Part will be fully operational and tested within ninety days of selection. In fact, as hopefully indicated within the preceding sections, ITA has already commenced the design and development of the technical requirements.

We are aware that PCS Relocator registrations may be filed within ten days of Bureau clearinghouse selection. ITA mechanisms will be in place in anticipation of that selection, so that initial clearinghouse functions may commence immediately.

During the course of its clearinghouse activity, ITA will remain attentive to any new

requirements that may result from further rule-making activities; for example, the potential that microwave incumbents may be permitted to relocate their systems and receive reimbursement rights. ITA's processes and procedures will be expeditiously amended to incorporate new mandates.

Finally, ITA will listen to the recommendations of its customers and will develop innovative services that will serve to support analytical requirements and the implementation of strategic objectives of strategic objectives. For example, additional services that ITA will be providing include the following:

- ◆ A "PTT Rectangle Digital Map", a sample of which is presented in Exhibit B-8, will plot PTT-generated rectangles, microwave link nodes/call signs within the rectangle and all affected PCS base stations. This product may be generated by PCS licensees who are utilizing ITA's Distributed PTT capability.
- ◆ PCS licensees may also, on demand or through a subscription basis, receive updated microwave data to their Distributed PTT CD-ROM.

To use this table, first find the row that corresponds to the number of months that have elapsed since the PCS relocater obtained reimbursement rights. Then, read across to the column corresponding to the PCS licensee being considered. For example, look under "2" for the 2nd licensee which would have interfered with the link. The amount shown is the total payment which will be split equally among the earlier PCS notifiers.
